

**Dyslexia is neurobiological in origin.  
A dyslexic child isn't being willful or lazy, and is not stupid.  
Using the same method over and over again to try to teach a  
dyslexic child will not improve their reading ability, but result in  
frustration - both yours and theirs.  
A dyslexic child wants to read more than they anything.  
Not teaching them via the science  
will lead to their anxiety, depression, and low self esteem.  
Be the teacher who changes their life for the better.  
Embrace the #ScienceOfReading via Structured Literacy.  
It will save more than the dyslexic child.  
It will save all of the children.**
